

LESSONS LEARNED

A Lesson Learned is knowledge and understanding gained by experience. Frequent lessons learned highlight strengths and weaknesses in planning, design and implementation that affect performance, outcome and impact. In IRIS, the Lessons Learned module provides a tool

to define, store and share experiences, considered important for other users. The module is an important part in experience transfer. Lessons Learned can be defined by their own as stand-alones, or as a result from an accident or incident report.

SAFETY FLASHES
